Dear Ms. Henney, I am deeply distrubed by the FDA's decisio
n not to require
that genetically engineered foods be labelled or tested pri
or to their sale
to consumers. There is enough scientific evidence currentl
y available to
cause grave concern about the effects to human and environm
ental health from
GE foods. The very least the FDA can do, as a regulatory a
gency entrusted
to protect the health of Americans, is require that product
s containing GE
foods be labelled, so that we may make our own choice for o
ur own health.

Why are you putting the welfare of the biotech corporations
above the

welfare of the American people?

Most of us are so busy these days, we do not have time to w
rite letters to

let our representatives know how we feel. I want you to kn
ow that I made

the time to write you because I believe this is a tremendou
sly important

issue. I can tell you with certainty that I represent thou
sands of others

in my city who may not write, but who believe just as stron
gly as I do.

Sincerely,

Holly Hutchinson
